The tallest building in every US state

Olivia Young Sep. 25, 2018

One World Trade Center is the largest skyscraper in the US.

Many of America's tallest skyscrapers have been built in the past five years — such as the Wilshire-Grand Center in Los Angeles, One World Trade Center in New York City, and the Comcast Technology Center in Philadelphia — and it seems as though US cities are racing toward the sky.

Other states, however, aren't feeling the pressure to build upward. South Dakota, Vermont, and Wyoming, for instance, don't have a single building over 200 feet, according to USA Today.

Some of the tallest US skyscrapers are power plants, while others are college dormitories or office buildings. Many of the rest are owned by big investment banks.

Here is the tallest skyscraper in every state:

Florida: Panorama Tower, Miami

Panorama Tower stands tall above the Miami skyline. [Phillip Pessar/Wikimedia Commons](#)

The Panorama Tower soars above the Miami skyline at 868 feet; however, it could soon be beat out by the proposed 890-foot flower-shaped Okan Tower, according to [Curbed](#).

Unique Visitors per Month: 36,784,440
